

# List of Contents

1. Introduction (D. Crisan, B. Rozovsky)
2. The Foundations of Nonlinear Filtering
  - 2.1 Nonlinear Filtering Problems I. Bayes Formulae and Innovations (H. Kunita)
  - 2.2 Nonlinear Filtering Problems II. Associated Equations (H. Kunita)
  - 2.3 Nonlinear filtering equations for processes with jumps (B. Grigelionis, R. Mikulevicius)
  - 2.4 The filtered martingale problem (T. G. Kurtz, G. Nappo)
3. Nonlinear Filtering and Stochastic Partial Differential Equations
  - 3.1 Filtering equations for partially observable diffusion processes with Lipschitz continuous coefficients (N. V. Krylov)
  - 3.2 Malliavin calculus applications to the study of nonlinear filtering (M. Chaleyat-Maurel)
  - 3.3 Chaos Expansion to Nonlinear Filtering (S. V. Lototsky)
4. Stability and Asymptotic Analysis
  - 4.1 On filtering with unspecified initial data for non-uniformly ergodic signals (M. L. Kleptsyna, A. Y. Veretennikov)
  - 4.2 Exponential decay rate of the filter's dependence on the initial distribution (R. Atar)
  - 4.3 Intrinsic methods in filter stability (P. Chigansky, R. Liptser, R. Van Handel)
  - 4.4 Feller and Stability Properties of the Nonlinear Filter (A. Budhiraja)
  - 4.5 Lipschitz continuity of Feynman-Kac propagators (W. Stannat)
5. Special Topics
  - 5.1 Pathwise Nonlinear Filtering (M. Davis)
  - 5.2 The Innovation Problem (A. J. Heunis)
  - 5.3 Nonlinear filtering and fractional Brownian motion (T. Duncan)
6. Estimation and Control
  - 6.1 Dual Filters, Path Estimators and Information (N. J. Newton)
  - 6.2 Filtering for Discrete-Time Markov Processes and Applications to Inventory Control with Incomplete Information (A. Bensoussan, M. Cakanyildirim, S. P. Sethi)
  - 6.3 Bayesian Filtering of Stochastic Hybrid Systems in Discrete-time and Interacting Multiple Model (H. A.P. Blom, Y. Bar-Shalom)
7. Approximation Theory
  - 7.1 Error bounds for the nonlinear filtering of diffusion processes (O. Zeitouni)
  - 7.2 Discretizing the Continuous Time Filtering Problem. Order of Convergence (D. Crisan)

7.3 Large sample asymptotics for the ensemble Kalman filter (F. Le Gland, V. Monbet, V.-D. Tran)

## 8. The Particle Approach

8.1 Particle approximations to the filtering problem in continuous time (J. Xiong)

8.2 Tutorial on Particle Filtering and Smoothing: Fifteen years later (A. Doucet, A. M. Johansen)

8.3 A Mean Field Theory of Nonlinear Filtering (P. Del Moral, F. Patras, S. Rubenthaler)

8.4 The Particle Filter in Practice (T. B. Schon, F. Gustafsson, R. Karlsson)

8.5 Introducing Cubature to Filtering (C. Litterer, T. Lyons)

## 9. Numerical Methods in Nonlinear Filtering

9.1 Numerical Approximations to Optimal Nonlinear Filters (H. J. Kushner)

9.2 Signal Processing Problems on Function Space: Bayesian Formulation, SPDEs and Effective MCMC Methods (M. Hairer, A. Stuart, J. Voss)

9.3 Robust, Computationally Efficient Algorithms for Tracking Problems with Measurement Process Nonlinearities. (J. M. C. Clark, R. B. Vinter)

9.4 Nonlinear filtering algorithms based on averaging over characteristics and on the innovation approach (G.N. Milstein, M. Tretyakov)

## 10. Nonlinear Filtering in Financial Mathematics

10.1 Nonlinear Filtering in Models for Interest-Rate and Credit Risk (R. Frey and W. Runggaldier)

10.2 An Asset Pricing Model with Mean Reversion and Regime Switching Stochastic Volatility, (R. J. Elliott, H. Miao, Z. Wu)

10.3 Portfolio optimization under partial observation: theoretical and numerical aspects (H. Pham)

10.4 Filtering with Counting Process Observations: Application to the Statistical Analysis of the Micromovement of Asset Price (L. C. Scott, Y. Zeng)
